“INSIDE INTERNET SECURITY:
WHAT HACKERS DON'T WANT YOU TO KNOW.”
SORRY, HACKERS.

(a.k.a.: the anti-hacker manifesto)

HOW CAN YOU BUILD OR RUN A SECURE E-BUSINESS INFRASTRUCTURE IN THE FACE OF UNPREDICTABLE HACKER ATTACKS? First, think like a hacker. Look at your infrastructure (your servers, software and storage systems) the way hackers do. Read *Inside Internet Security* by Jeff Crume, Tivoli Systems unhacker guru and CISSP security expert. Get his advice-filled 270-page book. *It's yours free for registering by phone or online (see below).*

Second, help protect your infrastructure with proven management tools like the Tivoli Security Solution from IBM.

The solution gives you a broad, flexible defense. It helps unite your core security technologies around common security policies. You can centrally implement a consistent access control policy while you centrally

manage your defenses. In real time, you can identify and respond to threats anywhere across your entire enterprise. Plus, even as your infrastructure evolves toward a proliferation of systems, your administrators can still keep centralized control.

You can help secure your existing applications without making changes to them, protect your customers' personally identifiable information, and allow e-business transactions to safely travel across your organizational boundaries.

Need more? Ask about our IBM Security and Privacy Services for a full security checkup. In fact, with our 90,000+ Business Partners, we can help you build/run an infrastructure that is better in every way that counts. Visit our Web site or call today for your free anti-hacker manifesto.
